

NVIDIA CORPORATION ? FY2025 FORM 10-K EXCERPT (SYNTHETIC FOR EVAL)

Item 7. Management's Discussion and Analysis

Data Center revenue remained the primary driver. For fiscal year 2025, total Revenue was \$130.5 billion.

Operating income reached \$81.4 billion. EBITDA for FY2025 was approximately \$86.0 billion.

Research and development expense (R&D) totaled \$12.9 billion as we scaled accelerated computing platforms.

Supply chain risk remains elevated due to advanced packaging capacity concentration in Taiwan and limited HBM vendors.

We continue to diversify substrate and OSAT partners, but lead times for CoWoS packaging remain a constraint.

Item 1A. Risk Factors

Customer concentration, export controls, and foundry capacity can materially affect gross margins.

Management commentary from earnings call:

CFO: We remain confident in durable Demand for AI infrastructure despite near-term supply constraints.

CEO: Capex intensity for hyperscalers is accelerating; our execution risk is packaging, not algorithms.
